EDUCATION

Carnegie Mellon University *Pittsburgh, PA*

Dec 2023

Bachelor of Science, Double Major in Artificial Intelligence and Music Technology

GPA: 3.70, Dean's List Fall 2023, Spring/Fall 2022

Selected Coursework:

Deep Learning, Modern Regression, Signals and Systems, Parallel and Sequential Data Structures and Algorithms, Probability Theory for Computer Scientists, Introduction to Computer Systems

EXPERIENCE

Software Engineer Intern, DefenseStorm

May 2023—Aug 2023

- Led a self-directed data analysis project using Python (NumPy, scikit-learn, Matplotlib) to build linear and neural-network-based regression models identifying previously unknown client data usage trends. Delivered findings in a 30 page technical report.
- Assisted in the creation of a natural-language data query tool that leveraged chatGPT prompt engineering to allow intuitive client access to targeted datasets.
- Developed Angular UI features from design mockups and fixed backend bugs in a Java web stack.

Recording Artist, Handwritten Records

2021—Present

- 3,000,000+ streams and 500,000 views on TikTok for original music under the alias "Bishop Ivy."
- Praised by [Rolling Stone](#), [Clash](#), [Metal Magazine](#), [Ones To Watch](#), [Flaunt](#).

Undergraduate Research Assistant, Carnegie Mellon University

Aug 2022—May 2023

- Assisted Associate Director of Frank-Ratchye STUDIO for Creative Inquiry in development and execution of digital archival asset management including processing, description, arrangement, and publication for scholarly use.
-

SKILLS

Programming Languages: Python, C, TypeScript, HTML/CSS, LaTeX

Tools: AWS, PyTorch, scikit-learn, NumPy, Matplotlib, GitHub

PROJECTS

Deep Learning Vocal Transformer

Spring 2023

- Implemented modified version of CycleGAN for style transfer of audio recordings of singers.
- Built automated data-cleaner for streamlined gathering of clean audio samples, implementing automatic stem separation and splicing at silence.

MyTorch

Fall 2022

- Implemented PyTorch neural network modules using NumPy for the course Introduction to Deep Learning, including: Linear, BatchNorm1d, Conv1d, Conv2d, RNNCell, and GRU.
- Also implemented ConvNeXt module for facial recognition and verification.
